FEATURE IN FOCUS

Operations

OPERATIONAL CONTROL

On a custom build with multiple moving parts, Business Pilot provided the team with full operational visibility. Having intelligent job costing, supplier management, delivery tracking, and central document storage in one single system allowed Silent View Windows to protect project margins and navigate complex site challenges with complete confidence.

BRIEF

Silent View Windows teamed up with sister company Thame Builders to create a bespoke new build home in Moreton, Oxfordshire. The project demanded a high-spec glazing package using Origin OW80 windows, an Origin entrance door, and Cortizo sliding doors to balance modern architecture, comfort, and long-term thermal performance.

THE CHALLENGE

Like many custom builds, the project faced complex site, infrastructure, and utility challenges. Managing high-end glazing alongside external complications required tight control over supplier deliveries, job costing, and scheduling to prevent site delays and protect project margins.

“Business Pilot gave us complete control over the window and door package from quotation through to completion.”

ENIS EVLAT, MANAGING DIRECTOR

Origin OW80 windows

Origin Entrance Door

Cortizo Sliding Doors

THE RESULT

The finished build is a stunning demonstration of modern architecture, quality craftsmanship, and exceptional attention to detail. By running the project through Business Pilot, Silent View Windows maintained complete end-to-end control from quotation to completion, keeping purchase orders, document storage, and site scheduling aligned in real time to deliver an outstanding home for the client.
